1 Model results

1.1 Mixed effects model

Δ **Model Fit:** The model demonstrated good fit with an AIC of 7949.585, BIC of 9129.193, and log-likelihood of -3774.793.

Δ **Random Effects:** The standard deviations and correlations for the random effects were as follows:

- (Intercept): StdDev = 1.25
- prophecy_sourceAstrology: StdDev = 1.10, Correlation with Intercept = -0.26
- prophecy_sourcePersonality: StdDev = 1.00, Correlation with Intercept = -0.22, Correlation with prophecy_sourceAstrology = 0.29
- Residual: StdDev = 0.35

Term	Estimate	StdError	PValue	lower	upper
(Intercept)	3.38	0.77	0.000	1.87	4.90
subscalePersonalization	-0.22	0.29	0.456	-0.79	0.35

Table 1: Table of regression results with statistical details

1.2 Model diagnostics

The detailed VIF values for each predictor are provided in the table below. As indicated, all VIF values were well below the threshold of 10, indicating that multicollinearity does not pose a significant problem for the predictors in our model.

Variable Name	VIF
const	75.25
composite_score	1.27
gullibility_score	1.31
paranormal_score	1.18
aias_score	1.17
big5_extraversion	1.20
big5_openness	1.33
big5_agreeableness	1.22
big5_conscientiousness	1.40
big5_emotional_stability	1.63
familiarity	1.10
interest_behavior	1.18
subscale_Reliability	1.50
subscale_Usefulness	1.50
subscale_Validity	1.50
prophecy_source_Astrology	1.34
prophecy_source_Personality	1.36
prophecy_group_Positive	1.02
